

### **REMARKS**

Claims 7 and 8 are currently pending in the application. Only claim 7 is in independent form.

Applicants wish to express their appreciation for the courtesies extended Applicants' representative, Amy E. Rinaldo, during a telephonic interview conducted on May 17, 2006.

The Office Action has objected to the use of the marks BLAST and GenBank because the marks have been utilized without being accompanied by generic terminology. The specification has been amended to include proper terminology and reconsideration of the objection is respectfully requested.

Claims 7 and 8 stand rejected under 35 U.S.C. §112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that Applicants regard as the invention.

The Office Action has held that claim 7 is unclear as to what is intended. Specifically, the Office Action questions whether the epitope-bearing clones are subject to the array for analysis, whether the clones themselves are arrayed, or if there is some other meaning. Claim 7 has been amended to more specifically recite how the analysis is performed, and reconsideration of the rejection is respectfully requested.

Claim 8, according to the Office Action, includes a limitation that has insufficient antecedent basis. Claim 8 has been amended to provide proper basis for all terminology recited therein. Reconsideration of the rejection is respectfully requested.

Claims 7 and 8 stand rejected under 35 U.S.C. §102(a) as being anticipated by the Sioud et al., reference. Reconsideration of the rejection under 35 U.S.C. §102(a), as anticipated by the Sioud et al., reference, as applied to the claims is respectfully requested. Anticipation has always been held to require absolute identity in structure between the claimed structure and a structure disclosed in a single reference.

In Hybritech Inc. v. Monoclonal Antibodies, Inc., 802 F.2d 1367, 231 U.S.P.Q. 81 (Fed. Cir. 1986) it was stated: "For prior art to anticipate under §102 it has to meet every element of the claimed invention."

In Richardson v. Suzuki Motor Co., Ltd., 868 F.2d 1226, 9 U.S.P.Q.2d 1913 (Fed. Cir. 1989) it was stated: "Every element of the claimed invention must be literally present, arranged as in the claim."

The Office Action has held that the Sioud et al., reference discloses an analysis of the humoral response in patients with cancer. Libraries from breast cancer cell lines were biopanned and positive clones were selected. Using serum antibodies from patients with breast cancer, IgG-binding phage-encoded cDNA products were selected and the clones identified important antigens. The Office Action has held that the disclosure is identical to the presently pending independent claims.

It is well known to biopan for a specific composition, as is disclosed in the Sioud et al., reference. However, there is no disclosure assay currently available that will screen or create an array of markers that are accurate in diagnosing and staging cancer or other forms of disease. In other words, while the Sioud et al., reference discloses biopanning methods that can determine the presence of a single marker, there is no disclosure for a method or assay that will screen for an unlimited number of markers within sera. The presently pending claim recites a method for detecting markers of disease. The purpose of the method is to use differential biopanning of normal patients and patients having the disease against a phage library in order to determine which markers are present in the disease state but are not present in the normal state. It is the limitless number of markers that are then used to create an array against which individuals suspected of having disease can be tested. This is not known or disclosed or suggested by any of the cited prior art. Since the Sioud et al., reference does not disclose the method of the presently pending independent claim, the claim is patentable over the Sioud et al., reference and reconsideration of the rejection is respectfully requested.

The remaining dependent claim not specifically discussed herein is ultimately dependent upon the independent claim. The reference as applied against the dependent claim does not make up for the deficiencies of the reference as

discussed above. The prior art reference does not disclose the characterizing features of the independent claim discussed above. Hence, it is respectfully submitted that both of the pending claims are patentable over the prior art.

If any remaining issues exist, Applicants respectfully request to be contacted by telephone at (248) 539-5050.

In view of the present amendment and foregoing remarks, reconsideration of the rejections and advancement of the case to issue are respectfully requested.

The Commissioner is authorized to charge any fee or credit any overpayment in connection with this communication to our Deposit Account No. 11-1449.

Respectfully submitted,

KOHN & ASSOCIATES, PLLC
